33. 24h volume,
34. num of investors,
35. num of models,
36. num of users or business,
37. num of Data scientists,
38. current TVL (Total Value Locked) in the platform
39. Trending in Models
40. ..... etc ....

I think it is difficult for us to deal with all of the functions above at once.
I think the best optimal solution is that we add features one by one by upgrading the project version.
